(a) every subset A, $|A| \le N/2$
exact $\sigma(A) = \max_t S_A$ (bits)
graph cut $C(A)$ (bits)
$N = 2$
$N = 3$
$N = 4$
$N = 5$
$N = 6$
(b) each particle shares its entropy
edge weight w_{ij} (bits)
N
$2\bar{S}_1/(N-1)$ (sharing)
N-independent weight (pair law)
measured w_{ij} (mean, range)
(c) the law carried to larger N
central-cut entropy S_N (bits)
N
sharing law, $\bar{S}_1$ saturating
range of the two other cases
pair law, fitted to $N \le 4$
measured
